

UltimateSwap

Whitepaper v1.0

brought to you by **Ultimate Tipbot**
ultimateswap.com | ultimatetipbot.com

UltimateSwap is a **Binance Smart Chain**-based decentralized Trading and Staking platform, based on the **Automated Market Maker** (AMM) model for swapping **BEP-20 tokens** as well as a token of the same name given the ticker "**US**" — the heart of the Ultimate ecosystem.

UltimateSwap allows users to trade without having to rely on centralized exchanges or offers being accepted by others — tokens remain in the user's wallet until a swap is completed. This is also known as **Peer-to-Contract trading** (P2C).

UltimateSwap offers users the following features:

Staking for Passive Income

Earn tokens by staking! Stake **UltimateSwap tokens** to earn free tokens — It's that easy! People around the world are generating a passive income from simply staking — Join them and watch your investments grow!

Yield Farming

Stake **LP tokens** & earn UltimateSwap tokens! With Yield Farming you are more exposed to market fluctuations than with Ultimate pools, but you can earn higher APR!

Earn Trading Fees

Even if the trading pair of your choice is not supported on the Farms page, you can still earn trading fees when you **provide liquidity** to Liquidity Pools (LPs)!

Lottery

Win big with UltimateSwap! — Choose your own numbers or let the smart contract pick for you, and cross your fingers! Good luck!

Payment for Services

UltimateSwap tokens are accepted as payment for services offered throughout our platforms, such as Telegram Tipbots, Moderator Bot, E-Commerce Platform, and more (see description below)! US token hodlers also get discounts on our services!

Lower Tipbot-Exchange Fees & Minimums

UltimateSwap tokens are accepted in Ultimate Tipbot's system for lower trading & withdrawing fees, as well as offering lower withdrawal minimums to members who own US tokens! More about Ultimate Tipbot below.

Ultimate Tipbot (ultimatetipbot.com | t.me/UlimateTipbot) is an important part of the project. The Telegram group is a **Tech-Demo of a new Tipbot system** and a way to introduce new users to crypto!

It offers people from around the world a **low barrier of entry** into the world of cryptocurrencies, as it only requires a Telegram account (more platforms are on the way!), while also teaching them about it. This is one of the ways we plan to do our part on the road to mass-adoption of crypto!

Ultimate Tipbot has been sharing different cryptocurrencies with our members 24/7 for **nearly a year**! It has become one of the most active groups on Telegram with over 350 unique daily visitors and 1,300 unique monthly visitors, forming a strong supporting community!

Currently Ultimate Tipbot supports 8 different coins:  **BTC**
 **BCH**  **BNB (BSC)**  **LTC**  **DOGE**  **RPD**
 **RDCT** &  **XEP**, and soon also **BEP-20 tokens** — **UltimateSwap** will be the first token supported!

For an up-to-date list of all Tipbots: t.me/UlimateTipbots

UltimateTipbot started as an idea for a **cross-platform privacy-focused Tipbot-based exchange**. Starting on Telegram and soon spreading to other platforms. All of it powered by our own token — **UltimateSwap!**

Future plans involve connecting the two parts of the project, for off-chain trading, where this would be beneficial as well as adding the ability to trade tokens for coins directly.

Currently Ultimate Tipbot offers:

Tips of Any Size

You can send another member 1 Satoshi or 100 Bitcoin — as long as you have the balance!

Rains for Active Members

Members become “active” by chatting and receive shares of any rains (coins) for the next 10 minutes.

Lucky Rains

A Lucky Rain picks three active members at random and divides the shared amount among them.

💎 Scheduled Rains

Rains can be set to repeat at specific intervals for a pre-set number of times. When a rain repeats, it also forwards the original Rain command, along with any message (if attached). This ensures that the most members possible get to see important messages!

💎 Trading

For now, members can trade their balances in a trading group (t.me/UltimateExchange) until trading is automated.

💎 Withdrawals

Users can withdraw as long as their balances are above the set minimums, which are in place to prevent wasting coins on blockchain fees.

💎 Community Tasks

Members can earn coins and tokens by supporting the project, guided by our Tasks Bot!

Future developments for Ultimate Tipbot:

💎 Automated Trading

Members can lock in their offer via Tipbot commands and another member can accept it or make a counter-offer of their own.

💎 Ranked Rains

Members can receive different ranks, based on their engagement with the community. Partially manually set by admins, partially automated. The rank can then determine the size of the share of rains they receive.

💎 Anti-Cheat Functionality

Because groups sharing crypto attract users with multiple accounts, we are constantly upgrading our **Moderator Bot** to detect and stop such activity. There are fool-proof methods which could eliminate this problem entirely, but it would require collecting information on our members, which goes against our goals and beliefs.

Ultimate Tipbot has been well accepted by Telegram users and many group owners alike. Many have expressed their interest in using it for their own groups.

Since running the servers required for the Tipbots to work is not free, this would require a renting system.

UltimateSwap tokens will be accepted as payment for these and other services, while also offering a discount. Some of our planned future services have already been on offer in the past through the **Coinbelay platform**.

The **Coinbelay platform** is currently being expanded and will be included under the Ultimate-umbrella.

UltimateSwap tokens will be accepted for payments on services and products like:

E-Commerce Platform

Create your own store using our tools and offer products or services in return for tokens or other payment methods!

Telegram Group Services

Ultimate Tipbot developed a large array of bots, such as a Moderator Bot with semi-automatic logs of admin actions. If a banned member asks to be reinstated, you can know exactly why they were banned!

Coinbelay

Coinbelay has been offering help to crypto projects for **over 3 years!** Crypto projects can display their info and links on our website. Developers can update their information as well as create faucets for their coins or tokens!

Custom Tipbot Development

Not only can users rent our Tipbots, but they can also request custom Tipbots per their specifications. This can come at higher prices due to the required extra amount of work and storage upgrades on our servers, so discounts if paid in UltimateSwap tokens are in place!

Advertising Services

Project owners can use UltimateSwap tokens to pay for their promotional messages to be included in our dedicated channel. Their messages would then get forwarded to our Tipbot group, where they will be seen by thousands of members on repeat!

Token Specifications:

💎 **Name:** UltimateSwap

💎 **Ticker:** US

💎 **Contract:** 0xb2e284d07345d2c9b6de508d251cc44307057c43

💎 **PreSale:** 2 x 1.5M US tokens

- **Part 1:** Direct PreSale on UltimateSwap.com

- 1.25M locked for 100 years on UltimateSwap
- 100% of any unsold tokens will be burned!

- **Part 2:** [PinkSale](#)

- 1.25M locked for 100 years on PancakeSwap
- 100% of any unsold tokens will be burned!

💎 **Team:** 2.5M US

💎 **Project Expenses^{*}:** 2.5M US

💎 **Inflation Control Mechanism:** Weekly Burns^{**}

^{*} Project expenses may include Marketing, Referral Bonuses, Airdrops and other expenses.

^{**} Weekly burns of tokens collected through fees, lottery, etc. If required, Team tokens may be staked and rewards burned to further control inflation.
